SDN™

SDN™ Technology allows for low-cost, high-throughput nanocomposite multifunctional coatings deposition on almost any substrate.

Advenira Enterprises Presents Findings at the 2014 African Corrosion Congress

SDN™ Coatings in the Corrosion Market to be Presented among Researchers, Industrial Practitioners

SUNNYVALE, Calif. –(July 26, 2014)-- Advenira Enterprises, Inc. is presenting at this year's Corrosion Institute of Southern Africa's inaugural African Corrosion Congress (AfriCORR) on July 26-30, 2014 in Pretoria, South Africa about the application of its novel Solution Derived Nanocomposite (SDN™) technology in the corrosion market.

Corrosion adversely affects many of the world's largest industries by slowly degrading the structural integrity and decreasing the lifetime of metal objects. Today's existing protection against corrosion creates environmental hazards and is costly for many industries.

Coatings by Advenira for industrial materials lessen the environmental impact through lower energy consumption and waste generation; and they create economic advantages through stronger durability and increased longevity.

"Environmentally friendly protection against corrosion is of utmost importance to reduce unnecessary wasting of resources without compromising health and safety requirements," Advenira CEO/CTO Dr. Elmira Ryabova states.

Advenira's protective coatings can be deposited on aluminum, stainless steel and similar metals, and leave excellent corrosion resistance without the use of toxic chromates or other hazardous chemicals. The coatings are colorless, optically transparent, and are excellent hard coating materials based on abrasion testing.

Advenira Enterprises, Inc. is a global provider of proprietary liquid-based protective, optical and functional nanocomposite coating materials. The company was founded by Dr. Ryabova as a means to address the world's increasing energy consumption and waste through the development of cost-effective, high-performance and environmentally friendly nanoscale coatings.

In the corrosion market, Advenira's patented SDN™ liquid-based coating technology is used for an array of industries, including Aerospace Materials and Parts, Automotive Bodies and Parts, Consumer Goods such as piping, Marine Boats and Equipment, and Water Purification Systems, among others.

About Advenira Enterprises, Inc.

Advenira Enterprises, Inc. is a California-based company located in the heart of Silicon Valley known for its novel Solution Derived Nanocomposite (SDN™) technology that allows for low-cost/high-throughput multifunctional coatings deposition on practically any type/shape/material substrate. Advenira commercializes its patented coatings technology in the Glass, Corrosion and Semiconductor markets – spanning the world's most important industries - with dramatic advantages over traditional techniques. For more information, please visit <http://www.advenira.com>.
